10. CONTACT US

1. VISION:

Silver Style & Design Ltd. believes that quality, dynamism, punctuality, and honesty are needed to develop the garments sector. Its mission is to develop the garments sector as well as the country's economy by supplying quality products and competing in the global market. As an Export-oriented RMG unit, **Silver Style & Design Ltd.** is striving to create a prestigious brand by which Bangladesh's reputation will be enhanced worldwide.

2. MISSION:

In order to find the vision materialized, the company shall:

- Build up a modern factory with state-of-the-art technology, skilled human resources, and total Productivity & quality-oriented management scheme aimed for continuous Improvement;
- Comply with all local and international compliances on social, labor and environment related. Issues;
- Develop unique brand identity through continuous research, training and motivation; and
- Company will engage with the community those who are in need of financial support to enhance their knowledge and skills to contribute to the country's brand image.

3. ABOUT US:

Silver Style & Design Ltd. is Private Limited Company Established as a 100% export-oriented garments factory. The brand-new facility complies with all ethical trading standards. The company is providing all facilities to ensure a better working environment like ventilation, poor lighting and cleanliness, supply bacteria free drinking water, enough toilets and sanitary care, medical facility, child day care and dining room. The company is committed to manufacturing quality garments under safe, lawful human and ethical conditions. We started manufacturing unit in 2012 at Zirabo, Ashulia, Savar, Dhaka, Bangladesh with 54000sft. Having three floors producing woven bottom/tops items. In view of the recent challenges, the sector needs to overcome the conventional manufacturing style and should introduce a modern production culture and embrace an innovative approach. Nevertheless resources, knowledge and skills are still deficient with most of the local RMG companies. The scenario has motivated the management to see the anticipated vacuum as opportunities to venture into for RMG business with new dimensions through diversifying products of enhanced values with the help of modern manufacturing practices, benchmarking with the requirements of global norms of compliances, and moving with more technology-based effort. This is the groundbreaking thought that has influenced to take decision to undertake the manufacturing project to excellence.

3A. SNAPSHOTS OF THE FACTORY

- ❖ Year of Establishment : 2012
- ❖ Nature of company : 100% Export Oriented Woven Readymade Garments Industry
- ❖ Factory Location : Zirabo, Ashulia, Savar, Dhaka, Bangladesh
:Tel: +880 1613 461020
- ❖ Corporate office : House: 1184(Level-6), Avenue: 11, Mirpur DOHS, Pallabi, Dhaka-1216
- ❖ No of Employees : 833 Workers, 102 Staffs, 16 mid Management & Admin,
02 Top Management.
- ❖ Regular working hours : 08.00 hrs. – 17.00 hrs., Lunch break 01 hour, 6 Days a Week.
- ❖ Main Fabrics Used : 100% Cotton Denim, Twill, Canvas, 100% Polyester, T/C
Spandex, Heavy/Light
- ❖ Total floors : 03
- ❖ Total floor area : 55500 Square Feet
- ❖ Total No. of Line : 8 Lines are running (Total project 22 lines).
- ❖ Factory location : 10 km from the Airport, 15 km from the Hotel Sonargaon
- ❖ Annual Volume : USD 19.31 Million

6. GENERAL PROCESS OF PRODUCTION

MERCHANDISING DEPARTMENT

We have a fully well setup Merchandising Department. The task of our Merchandiser starts with correspondence, then gradually comes Consumption, Pricing Sampling, Production, Packaging, shipment & finally the documentation process in the correspondence period a Merchandiser knocks a buyer for order. The buyer is asked to give a test order to check out the selling company's ability. The introductory communication process goes on until any disposal is given by the buyer. Our Merchandiser must be attentive, Cool & Calm when reading the order sheet or the technical specification or the buyer instruction. The Merchandiser must do lots of paperwork and to avoid any mistake should make a cross-check with others. Sampling is the process of testing one's ability and expertise. Our Merchandiser capable to do the proper way to bring the suppliers in the correct way of working, to make the expert, to give them idea of styling, rectification everything is for the outcome of the right product city. There are some types of sampling like as: 1). Proto Sample/First Sample, 2). Fit Sample, 3). Size set sample, 4). Preproduction sample, 5). Production sample, 6). Shipment sample, 7). Salesperson sample, 8). Photo shoot sample, 9). Offer Sample, 10). Fabric Sample, 11). Accessories Sample, 12). Document Sample

DESIGN MAKING

Any garmenting deal is originated from preferred designs of apparel. If design is not supplied by buyer, a garment factory has to develop the design and prepare sample to take buyer's approval. In Bangladesh, designs are usually supplied by buyers; the local garments often supplement the design with styling support. However, some local garments partly develop designs that add more value to their apparel. HBS Apparels Ltd. will source designs from local and international schools of fashion designs or will use buyer supplied samples or will procure from buyer dictated sources. Zirabo, Ashulia, Savar, Dhaka, Bangladesh. Tel: +880 1613 461020

Designers begin to materialize their ideas using hand sketches, off-the-rack garments, technical drawings, three-dimensional draping on dress forms, or computer-aided design (CAD). CAD is becoming increasingly popular, partially due to the ease with which images can be redrawn, altered, and modified; and partially attributable to the active marketing efforts of apparel computer system manufacturers such as GEMENI Technology, Lectra Systems, Pad Systems, Inc., Snap Fashun and Tukatech, Inc. HBS Apparels Ltd. provides first preference to GEMENI Technology.

FABRIC SELECTION

What type of apparel would be used is often dictated by buyers. No matter who, manufacturer or buyer, selects or approves fabrics, an apparel manufacturer must inspect the fabric stock upon arrival to detect any fabric non-conformities or irregularities early in the production process to ensure that the fabrics of exact specifications are used. However, this project will have the ability to offer best fabric specifications to buyers for their approvals and will jointly monitor fabric manufacturing in cooperation of supplier textile mills to ensure exactly quality fabrics supplied to the inventory. This will mitigate quality risks involved with fabrics and eradicate overlapped time and cost for rejection, reprocessing, changing etc.

PATTERN MAKING

Which varies by type and size of garments, is the first step in garment manufacturing. Patterns are done by hands using suitable hard boards of certain specifications. Accurate pattern making facilitates sub-sequent cutting of fabrics required for different parts/components of Garments.

PATTERN GRANDING

Patterns initially are made in only one size. In order to produce clothing that fits various body types and sizes, the pattern pieces must be increased or decreased geometrically to create a complete range of sizes. The process of resizing the initial pattern is called "grading." Our company determines its own grade specifications for each size, and size specifications vary slightly from manufacturer to manufacturer. Using a CAD system, the pattern can be resized according to a predetermined table of sizing increments (or "grade rules"). The computerized plotter can then print out the pattern in each size. Because the productivity gains are so great, we use native CAD systems for grading.

FABRIC LAYING/SPREADING

Spreading is the process of unwinding large rolls of fabric onto long, wide tables in preparation for cutting each piece of a garment. The number of layers of fabric is dictated by the number of garments desired and the fabric thickness. Spreading can be done by hand or machine. Depending upon the fabric and cutting technology, up to 200 layers of fabric may be cut at one time. Fabrics that are more difficult to handle are generally cut into thinner stacks.

MARKERS MARKING

Markers are printed on paper plotter and laid on the fabric for cutting.

FABRIC CUTTING, PARTS MARKING/ LABELING & BUNDLING

The fabrics laid on the cutting table are cut with the help of straight knife cutting machine. The cutting table would be in very good condition and a vacuum system will be installed under the table to hold down fabrics while cutting via vacuum and lift lays for moving on the table via blown air. The individual pieces of garments are marked after cutting so that they may be identified during stitching into garments of respective sizes.

BUNDLING

BUNDLING is the process of disassembling the stacked and cut pieces and reassembling them in production lots grouped by garment unit, color/dye lot, and number of garments. We use a variety of bundling methods depending on their needs.

STITCHING & ASSEMBLING

This is the main assembly stage in the production process, where sewers (sewing machine operators) stitch fabric pieces together, and a garment is assembled. Computerized sewing machines can be programmed to sew a specific number of stitches to perform a standard operation, such as setting a zipper or sewing a collar. However, even though new machines mechanize and hasten the sewing process, sewing remains largely labor- intensive in typical garments factories. In this field our strong point is our all machinery is the latest version and our operators are skilled.

Finally, after all the packing formalities are completed, a packing list of the goods is made. The packing list is made mentioning carton number, style, color, ratio, carton measurement etc.

INSPECTION AND DELIVERY

Before delivery, goods are being inspected by the inspector using the packing list in order to confirm the Quality of customers specification. The inspector may be the internal quality team or the management members who are experts. If the buyer requires, third party inspection can be occurred. All about the inspector is mentioned as per LC terms & conditions.

After all these checking a report is sent to the buyer for approval in case of the third-party inspection. Otherwise, an inspection certificate is issued to the beneficiary who makes the goods. The ultimate beneficiary is the factory.

DELIVERY

At the finishing, goods are handed over to the freight forwarder or the shipping agent within the latest shipment date in both case of air or sea shipment. Sometimes the ultimate buyer nominates the freight forwarder to take the delivery. Then the goods are delivered to the port of destination.

7. CODE OF CONDUCT

SLNO.	ISSUES OF COMPLIANCE	COMPANY'S STATUS
01	Internal Compliance Team	SILVER STYLE & DESIGN LTD. has its own dedicated Internal Compliance team having a Compliance Manager who is under the direct supervision of the Managing Director. All the Compliance Officers are well educated in Local labor Law, Company law, as well as Environmental Law. They are also trained in Wages and Benefit policy, Health & Safety policy.
